

# ESA S.R.L.

## About Esa

Since 1999, on the back of many years' experience in the field of seals and supply of industrial spare parts, ESA Srl, with its simplified and flexible set-up, is able to adapt to the needs of all medium/large-scale plants.

In 2004, ESA launched its production of Energized Seals - at first made with toroidal springs and then in 2005 introducing its "finger-springs".

From the outset, the aim of making this type of seal is that of achieving excellence by making use of the best raw materials and machinery available.

We are an innovative manufacturer as is proven by our constant search for solutions to enhance our lines and the materials used. Our flexible and streamlined organizational structure allows for speedy quotations and order processing, whilst preventing bureaucratic delays.

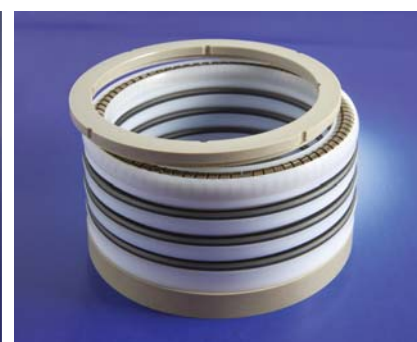

## Products

Every stage of the design and manufacturing process is carried out in the Marnate (VA-Italy) plant. Our only goal is to provide customer satisfaction with our high-quality products, flanked by a high level of customer service, both during and after sales, and technical support.

### **Energized seals:**

For all situations where rubber O-rings cannot be used due to problems with temperature, pressure or chemical compatibility.

- Temperature ranging from -196° C to 300° C.
- Pressure ranging from 0 to 1500 Bar for ANSI 150 to 2500 and API 2000 to 15000.

- Diameters can vary from a minimum of 15 mm up to max of 2300 mm.

Made-to-measure seals can be made for use in grooves that are of different size than those listed in our catalogue.
